

Web Programming – Week 2 – Working Questions

Altınbaş University – Department of Software Engineering

Instructor: Asst. Prof. Dr. Fatma Kuzey Edeş Huyal

Student Name: _____ **Student ID:** _____

Question 1 – Practical CSS Selectors Exercise

In this question, you will practice CSS selectors such as:

- class selectors (example: `.card`)
- id selectors (example: `#mainTitle`)
- specific selectors (example: `div p, ul li, a:hover`)

Step 1: Create the HTML file

Create a file named `exercise3.html` and copy the code below:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <title>Exercise 3 - Selectors</title>
  <link rel="stylesheet" href="style.css" />
</head>
<body>

  <h1 id="mainTitle">Welcome to My Web Page</h1>

  <p class="introText">
    This is a small webpage for practicing CSS selectors.
  </p>

  <a class="mainLink" href="https://www.wikipedia.org" target="_blank">
    Visit Wikipedia
  </a>

  <div class="card">
    <h2 class="cardTitle">My Favorite Image</h2>

    

    <p class="cardText">
      This image is inside a card. Use CSS to style this section.
    </p>
  </div>

  <h2>My Hobbies</h2>
  <ul class="hobbyList">
    <li>Reading</li>
    <li>Watching movies</li>
    <li>Walking</li>
  </ul>

</body>
</html>
```

Step 2: Create the CSS file

Create a file named `style.css`. Write CSS rules to do the following:

- Center the heading `#mainTitle` and change its text color.
- Change the font size of `.introText`.
- Add a border and padding to `.card`.

- d) Make the image `.cardImage` smaller (example: width 300px).
 - e) Change the link color of `.mainLink`. Also, change the link color when the mouse hovers over it (`:hover`).
 - f) Change only the list items inside `.hobbyList`.
-

Question 2 – Conceptual Question (Invalid Code)

Answer briefly:

- a) Why does invalid HTML or invalid CSS sometimes still work in the browser?
 - b) When does invalid HTML/CSS cause problems or break the page?
 - c) Why do we get errors in Java when something is wrong, but browsers still display the page?
-

Good luck!
